YEAR 2023 ANNUAL DRINKING WATER QUALITY REPORT - VILLAGE OF PALATINE BRIDGE

PO Box 208, 11 West Grand St., Palatine Bridge, NY 13428 • Ph: 518- 673-2917 • Fax: 518-673-3481 • ID #2800142

INTRODUCTION: To comply with State regulation, The Village of Palatine Bridge will be annually issuing a report describing the quality of your drinking water. The purpose of this report is to raise your understanding of drinking water and awareness of the need to protect our drinking water sources. Last year, your tap water met all State drinking water health standards. We are proud to report that our system has never violated a maximum contaminant level. This report provides an overview of last year's water quality. Included are details about where your water comes from, what it contains, and how it compares to State standards. If you have any questions about this report or concerning your drinking water, please contact Mr. Rodney Sutton, Water Superintendent, Village of Palatine Bridge, 11 W. Grand St., Palatine Bridge, NY 13428; Telephone (518) - 673- 2917 or in an emergency (518) -791-8079. We want you to be informed about your drinking water. If you want to learn more, please attend any of our regularly scheduled village board meetings. They are held on the 3rd Tuesday of each month, 6:30 PM at the Village Hall, 11 W. Grand St; telephone (518)-673-2917. Village office hours are 8:00am to 1:00 pm Monday thru Thursday.

WHERE DOES OUR WATER COME FROM? In general, the sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and pick up substances resulting from the presence of animals or from human activities. Contaminants that may be present in source water include: microbial contaminants; inorganic contaminants; pesticides and herbicides; organic chemical contaminants; and radioactive contaminants. In order to ensure that tap water is safe to drink, the State and the EPA prescribe regulations, which limit the amount of certain contaminants in water provided by public water systems. The State Health Department's and the FDA's regulations establish limits for contaminants in bottled water which must provide the same protection for public health. The Village of Palatine Bridge draws its water from a ground water source. The Village is served by one drilled well 1000-feet deep located 1.5 miles north of the Village boundary on State Highway Route 10. Pumping capacity for this well is approximately 500 gallons per minute. Treatment of the raw water produced by the well consists of chlorination, which is used for disinfection to protect against contamination from harmful bacteria and other organisms. We have a 300,000-gallon underground storage tank and a 250,000-gallon above ground storage to meet consumer demand and provide adequate fire protection. We provide water through 342 service connections to a population of approximately 900 people. Our average daily demand is 85,000-gallons per day. In February of 2005 a new triplex water softening system was installed to provide better water quality.

SOURCE WATER ASSESSMENT: The NYS DOH has completed a source water assessment for the Village of Palatine Bridge water system, based on available information. Possible and actual threats to this drinking water source were evaluated. The state source water assessment includes a susceptibility rating based on the risk posed by each potential source of contamination and how easily contaminants can move through the sub-surface to the well. The susceptibility rating is an estimate of the potential for contamination. See section "Are there contaminants in our drink water?" for a list of contaminants, if any that has been detected. The source water assessments provide resource managers with additional information for protecting source waters into the future. As mentioned before our water is derived from a drilled well. The source water assessment has rated this well as having a high susceptibility to bacteria, viruses, and protozoa and a medium- high susceptibility to herbicides, pesticides and nitrates. These ratings are due primarily to agricultural activities in the assessment area. In addition, the well draws from an unconfined aquifer of high hydraulic conductivity. While the source water assessment rates our well as being susceptible to microbials, please note that our water is disinfected to ensure that the finish water delivered into your home meet New York State's drinking water standard for microbial contamination. A copy of the source water assessment, including a map of the assessment area, can be obtained by contacting us as noted in the introduction in the first section.

ARE THERE CONTAMINANTS IN OUR DRINKING WATER? As the State regulations require, we routinely test your drinking water for numerous contaminants. We test your drinking water for inorganic compounds, nitrite, lead and copper, volatile organic compounds, and synthetic organic compounds. In addition, we test for coliform bacteria once a month, and fluoride and chlorine daily. The table presented below depicts which compounds were detected in your drinking water. This table shows the results of our monitoring for the period of January 1st to December 31st, 2018. The State allows us to test for some contaminants less than once per year because the concentration of these contaminants does not change frequently. Some of our data, though representative, are more than one year old. You may obtain a copy of all our test results by contacting the Village office or Rodney Sutton. It should be noted that all drinking water, including bottled drinking water, might be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791) or the New York State Department of Health, District Office, 5665 State Route 5, Herkimer, NY, telephone; (315-866-6879).

This table does not represent all testing. We have met all NY State Standards. A copy of all our testing is available at the village office.

| VILLAGE OF PALATINE BRIDGE TEST RESULTS | | | | | | |
|---|----------------|----------------|-------------|--------------------------------------|-------------------------|---|
| Contaminant | Viol ation Y/N | Lev. Dete cted | Unit Msmt. | MCLG | MCL | Likely Source of Contamination |
| PFOA | | | | | | |
| Perflourinated Compounds | 10/18/23 | N | 1.78 ng/L | <2 | 10 ngl | Industrial surfactant in chemical processes and as a material feedstock. |
| | 10/18/23 | N | <2 | | | |
| Dioxane | 10/18/23 | N | <0.1 ug/L | <0.1 | 1 ug/l | |
| | 10/18/23 | N | <0.1 | | | |
| Inorganic Contaminants tested- | | | | | | |
| Arsenic Data from 7/19/23 | N | <0.0010 | ppb | n/a | .01 | Erosion of natural deposits: runoff from orchards; runoff from glass and electronics production wastes. |
| Barium Data from 7/19/23 | N | .0148 | ppb or ug/l | 2000 | 2.00 | Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits |
| Chloride Data from 7/19/23 | N | 123 | Mg/l or ppm | N/A | 250 | Naturally occurring of indicative of road salt contamination |
| Copper Data from 7/19/21 | N | .0617 | Mg/l | 1.300 | 1.000 | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives |
| Fluoride 6/10/19 Data from | N | .386 | ppb or ug/l | n/a | 2.2 | Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories |
| Iron Data from 7/19/23 | N | .0500 | Mg/l | n/a | 300 | Naturally occurring. |
| Lead Data from 7/3/18 | N | .0016 | Mg/l | 0 | AL=15 | Corrosion of household plumbing systems, erosion of natural deposits |
| Manganese Data from 7/19/23 | N | .00308 | ppb or ug/l | N/A | 300 | Naturally occurring. Indicative of landfill contamination |
| Nickel Data from 7/19/23 | N | <.0005 | ppb or ug/l | n/a | .01 | Discharge from steel/metal factories; EPA regulations require us to monitor this contaminant while EPA considers setting a limit on it. |
| Nitrate Data from 4/5/23 | N | <0.062 | ppb or ug/l | 10,000 | 10 mg I as N 1mg I as N | Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits |
| Sulfate Data from 7/19/23 | N | 69.8 | ppm or mg/l | n/a | 250.0 | Geology; EPA regulations require us to monitor this contaminant while EPA considers setting a limit on it. MCL is for NYS |
| Zinc Data from 7/19/23 | N | .0115 | mg/l or ppm | N/A | 30 | Naturally occurring; Mining waste |
| Synthetic Organic Contaminants including Pesticides and Herbicides (data from 8/02/23) | | | | | | |
| Contaminants were monitored with no detects. | | | | By-product of industry & agriculture | | |
| Trihalomethanes Data from 7/31/23 | | | | | | |
| TTHM [Total trihalomethanes] 4-quarter running average (highest) | N | 26.7 | Ppb or ug/l | 0 | 80 | By-product of drinking water chlorination |
| HAA5 Data from 7/13/23 Total Haloacetic Acids | N | 17.8 | UG/L | | | By-product of drinking water chlorination |
| Volatile Organic Contaminants (data from 4/14/23) | | | | | | |
| A total of 54 contaminants were monitored | n | >0.00994 | Ppb or ug/l | n/a | 5 | By-product of industrial processes and petroleum production |
| Unregulated Synthetic Organic Contaminants including Pesticides (data from 7/01/20) | | | | | | |
| Contaminants were monitored with no detects. Unregulated contaminant Monitoring helps EPA determine where certain contaminants occur and whether it needs to regulate these contaminants. | | | | By-products of industrial processes | | |

Definitions:

- Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible.
- Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements, which a water system must follow.
- Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.
- Non-Detects (ND):** Laboratory analysis indicates that the constituent is not present.
- Nephelometric Turbidity Unit (NTU):** A measure of the clarity of water. Turbidity is excess of 5 NTU is just noticeable to the average person.
- Milligrams per liter (mg/l):** Corresponds to one part of liquid in one million parts of liquid (parts per million-ppm)
- Micrograms per liter (ug/l):** Corresponds to one part of liquid in one billion parts of liquid (parts per billion- ppb)
- Nanograms per liter (ng/l):** Corresponds to one part of liquid to one trillion parts of liquid (parts per trillion - ppt)
- Picograms per liter (pg/l):** Corresponds to one part of liquid to one quadrillion parts of liquid (parts per quadrillion ppq)
- Picocuries per liter (pCi/L):** A measure of the radioactivity in water.
- Millirems per year (mrem/yr):** A measure of radiation absorbed by the body.
- Million Fibers per Liter (MFL):** A measure of the presence of asbestos fibers that are longer than 10 micrometers.
- Parts per million (ppm) or Milligrams per liter (mg/l):** One part per million corresponds to one minute in two years or a single penny in \$10,000. or 1000ppb equal 1ppm Ex: 500ppb = .5ppm
- Parts per billion (ppb) or Micrograms per liter (ug/l):** One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- Parts per trillion (ppt) or Nanograms per liter (nanograms/l):** One part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.
- Maximum Contaminant Level- (Mandatory Language)** The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum Contaminant Level Goal- (Mandatory Language)** The "Goal" (MCLG) is the level of a contaminant in drinking water below, which there is no known or expected risk to health. MCLGs allow for a margin of safety. n/a-not applicable

WHAT DOES THIS INFORMATION MEAN? As you can see by the table, our system had no violations. We have learned through or testing that some contaminants were detected; however these contaminants were detected below the level allowed by the State.

IS OUR WATER SYSTEM MEETING OTHER RULES THAT GOVERN OPERATIONS?

During the year 2021, our system was in compliance with applicable State drinking water operating, monitoring and reporting requirements.

DO I NEED TO TAKE SPECIAL PRECAUTIONS? Although our drinking water met or exceeded state and federal regulations, some people may be more vulnerable to disease causing microorganisms or pathogens in drinking water than the general population. Infants and young children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than at other homes in the community as results of materials used in your home's plumbing. If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water. Additional information is available from the Safe Drinking Water Hotline. Immuno-compromised person such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice from their health care provider about their drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium, Giardia and other microbial pathogens are available from the Safe Drinking Water Hotline (800-426-4791).

WHY SAVE WATER AND HOW TO AVOID WASTING IT? Although our system has an adequate amount of water to meet present demands, there are a number of reasons why it is important to conserve water.

- Saving water saves energy and some of cost associated with both of these necessities of life.
- Saving water reduces the cost of energy required to pump water and the cost of treating the water.
- Saving water lessens the strain on the water system during a dry spell or drought, helping to avoid severe water use restrictions. So that essential fire fighting needs is met. You can play a role in conserving water by becoming conscious of the amount of water your household is using, and by looking for ways to use less whenever you can. It is not hard to conserve water. **Conservation tips include:**
- Automatic dishwashers use 15 gallons for every cycle, regardless of how many dishes are loaded. So get a run for your money and load it to capacity.
- Turn off the tap when brushing your teeth.
- Check every faucet in your home for leaks. Just a slow drip can waste 15 to 20 gallons a day, 3600 gallons in 6 months. A steady drip or stream 1/16" at 60lbs pressure can waste 74,000 gallons in 3 months.
- Check your toilets for leaks by putting a few drops of food coloring in the tank, watch for a few minutes to see if the color shows up in the bowl. It is not uncommon to lose up to 100 gallons a day from one of otherwise invisible toilet leaks. A 100 gallons a day can amount to 9000 gallons in a 3-month period or 18000 in a 6-month period.
- A One Quarter (1/4) inch Hose or stream of water at 60 lbs of water pressure can amount to a loss of 13,000 gallons or more in 24 hours.

Water Rates In 2023 the water customers in Village of Palatine Bridge were charged \$8.00 per 1000 gallons with a minimum of \$96.00, while out of village limits customers were charged \$16.00 per 1000 gallons with a minimum of \$192.00

CLOSING Thank you for allowing us to continue to provide your family with quality drinking water this year. Please call our office (518)-673-2917 if you have questions.

Houseplant Tip

It's important to watch houseplants closely. According to gardenguides.com, an online gardening resource, you should inspect plants regularly for yellowing or discolored leaves. This condition is usually caused by overwatering, but can also be the result of insects. Deformed plants and sticky deposits on leaves and stems can be caused by insects as well.

LAWN & GARDEN

Eco-friendly lawn care can be easy

Homeowners know that a healthy lawn can add considerable curb appeal to a property while giving residents of the home a place to relax and enjoy the great outdoors. But few might know that a healthy lawn can also benefit the environment, especially when homeowners take a proactive approach to lawn care that emphasizes eco-friendly techniques.

A proactive approach to lawn care can prevent certain problems, including disease, insect infestation and weed growth. When such problems arise, many homeowners opt to combat them with pesticides, which can harm the environment. But a proactive approach to lawn care can reduce the likelihood of developing such problems and protect the planet at the same time.

• Emphasize healthy soil. Healthy soil promotes strong roots, which leads to

a more robust, lush and aesthetically appealing lawn. While a lawn needs to be fertilized in the spring and at various points throughout the summer, it's important that homeowners avoid overfertilization, which can create thatch that, when allowed to thicken, will prevent nutrients from penetrating the soil. Lawns need more nitrogen, phosphorous and potassium than soil can typically provide, so fertilizing throughout the warm weather seasons and into early fall can promote a healthy lawn. But choose a slow-release fertilizer so it gradually feeds the lawn. Compost and grass clippings can also be spread around the lawn to promote healthy soil. The pH level of the soil should also be checked to ensure the lawn can fully absorb nutrients. Speak with a local lawn care professional to determine what a healthy pH level is for soil in your area.

• Choose a grass that can thrive in your climate. Though you might prefer the look of a certain grass, choosing a grass based entirely on appearance is a mistake that could cost you money and prove harmful to the environment. When installing a new lawn, opt for one that's suitable to the local climate. Installing a lawn that needs substantial amounts of water in a region known for drought can rob the lawn of its aesthetic appeal and will cost homeowners a substantial amount of money to maintain. If an existing lawn struggles to stay green regardless of your best efforts, then consider replacing it with a new type of grass that might be more suited to the local climate.

• Don't cut too low when mowing. Homeowners who don't enjoy mowing their lawn might be tempted to simply cut the grass as low as possible to extend the intervals between cuts. But the United States Environmental Protection Agency recommends that grass never be cut more than one-third of the height of the grass blades. Longer grass can take in more sunlight, allowing it to grow in thicker and develop a deeper root system. That deep root system can help a lawn survive drought and prevent disease, two potentially costly problems that often force homeowners to embrace solutions that are not eco-friendly. Ideal lawn height depends on the type of grass, so consult a lawn care professional to ensure you are cutting your grass to a healthy length.

• Avoid overwatering. Excessive watering not only wastes water, which is not very eco-friendly, but also hurts the lawn when dry periods inevitably arrive. That's because shallow and frequent watering encourages roots to stay near the surface, so when dry periods arrive, the roots struggle to find water. The EPA notes that an established lawn should not need daily watering. Instead, watering responsibly when the lawn needs water and when evaporation can be kept to a minimum, can strengthen a lawn and do so in an eco-friendly way. GT144076
